## From parameters to observables in the

2HDM

Saturday 02 Dec 2017 at 17:30 (00h15')

### Content :

A straightforward method to translate the potential parameters of the 2HDM into physical masses and couplings is presented. The method is applied to CP-odd and CP-even weak-basis invariants of the model in order to express them exclusively in terms of the physical observable masses and couplings.
